

EASTERN PROVINCE SMART PARKING

Intelligent Operations at **City Scale.**

Eastern Province requires a parking platform that eliminates kiosks, automates payment entirely, unifies lighting execution, and remains future-proof for 15 years. We deliver a custom-built digital concession ecosystem.

CONCESSION LONGEVITY

1

UNIFIED DASHBOARD

Seamless Transactions, Zero Friction.

- **Instant Detection:** High-precision ANPR cameras log vehicle entry automatically without any human intervention.
- **Real-Time Session Generation:** Our cloud engine calculates dynamic tariffs in under 2 seconds.
- **Automated Driver Alerts:** Mobile push notifications provide a seamless one-tap payment link.
- **Guaranteed Compliance:** Payments mark sessions compliant instantly. Unpaid sessions generate legally backed incident reports.
- **Proactive Resolution:** Any hardware fault triggers immediate work orders seamlessly.

The Power of the Smart Pole Ecosystem.

💡 Intelligent Lighting Anchor

Pre-upgraded with our SmartTec node, the luminaire reports real-time health and guarantees stable 24/7 power to the attached surveillance systems.

📷 Wide-Angle ANPR Camera

Precisely mounted to maximize bay coverage. A single unit covers up to 28 bays, eliminating the need for expensive per-bay sensors.

💻 Edge Processing Computations

Advanced AI reads the license plate locally at the pole, minimizing bandwidth usage and delivering instant identification to the cloud platform.

Flawless Payment Orchestration.

The core of smart parking is revenue security. We built a payment engine that ensures every riyal owed is cleanly collected or enforced.

Saudi Payment Integrity

The platform never creates dependencies on a single wallet. A centralized Gateway normalizes STC Pay, mada, and Apple Pay instantly.

Absher Integration Readiness

Government endpoints are architected securely behind sandboxes during the pilot, ensuring we flip the switch seamlessly for full production without redevelopment.

One Dashboard for Streetlights and Cameras.

Managing execution in silos doubles OPEX. We unify the response into a single high-performance pipeline targeted at maximum asset uptime.

- **Holistic Threat** A camera offline or a lamp failed enters the exact same
Logging: triage queue instantly.
- **Algorithmic** Work orders are sent sequentially to contractors based on
Dispatch: geospatial proximity and skill sets in under 60 seconds.
- **Revenue** Because an offline camera loses money by the minute, our 8-
Protection: hour restoration SLA strictly enforces high profitability.

Unbreakable Scale. Future-Proof Logic.

Hardware Independence Layer

Over 15 years, camera hardware will be refreshed twice. A proprietary Translator Layer ingests data from any manufacturer brand, meaning zero backend rewrites.

Saudi First, Regional Ready

By keeping local compliance (Wallets, Absher) in secure API adapters, launching the core platform across Bahrain or Qatar becomes a configuration exercise.

Testing Reality Before Committing Capital.

Phase 1: Technical Validation

Deploying 15 cameras across 3 street types to guarantee >95% ANPR daytime accuracy and calculate the highest spatial unit economics.

Phase 2: Payment Journeys

Activating 500 live tracking users. Securing our payment conversion thresholds (>65%) and establishing the exact SLA baseline for incident closures.

Phase 3: Rollout Sign-off

Presenting validated, hardened empirical data to the Eastern Province stakeholders to lock in the 75,000-space blueprint confidently.

The Definitive Platform For Eastern Province.

1. Purpose-Built Advantage

Designed exclusively around this concession's fiscal logic. Not a generic platform.

2. Payment Prioritization

Financial orchestration is the heart of the engine, ensuring maximum revenue capture.

3. The SmartTec Leverage

Grid-powered networking provides a unit cost advantage unmatched in the region.

4. 15-Year Scalability

Hardware agility secures the software infrastructure against rapid hardware depreciation.

5. Phased De-Risking

A meticulously structured pilot guarantees decision-making based on concrete regional data.

6. Immediate Action Items

Ready to deliver final architectures and API alignment designs instantly.
